- Housing material: plastic
- Retractable cord length: 300 cm
- For cables with a diameter of: 9.5 to 18 mm

Charging station with EVP mount

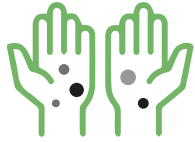

Charging station without EVP mount

What is the spring-loaded holder for the wallbox charger cable used for?

The **PNEUMATICO EVP** holder is designed to manage the charging cable of an electric car. The housing is made of plastic, ensuring resistance to adverse weather conditions. Its modern design ensures the product's high aesthetic appeal. The device has two operating modes: continuous and ratchet. The cable is 300 cm long and made of Dyneema® fiber. Installation is quick and easy. The suspended cable always stays clean, just like the user's hands.

CLEANLINESS

Since there is no direct contact with the cord, your hands will always stay clean.

DURABILITY

The sturdy construction and protective cover ensure durability in any season, regardless of the weather.

TIME SAVINGS

Charging your car is now much easier and faster.

CABLE MANAGEMENT

No more annoying, tangled cords.

SAFETY

Cables are stored safely, with no risk of snagging.
