Retractor EV

# What is **Retractor EV** used for?

The EV Retractor is designed to hold the electric car's charging cable. The Retractor's housing is made of stainless steel, allowing it to be used outdoors. It rotates 180 degrees, making it easy to handle the charging cable. Its modern design and powder coating ensure the product's high aesthetic appeal. The Retractor's cable is 300 cm long and made of special, highly durable Dyneema® fibers that do not damage the car's body. At its end is a swivel handle that prevents the cable from twisting. The retraction force can be adjusted with a flat wrench. Installing the Retractor is quick and easy. The suspended cable always remains clean, just like the operator's hands.

Lifting capacity ranges from 1.00 kg to 8.00 kg.

Does the Pneumatico Retractor EV work with any charger cable?

**YES!** When choosing a Retractor EV model, you should consider two specifications of the charging cable: its diameter and weight.

1,0-8,0 kg

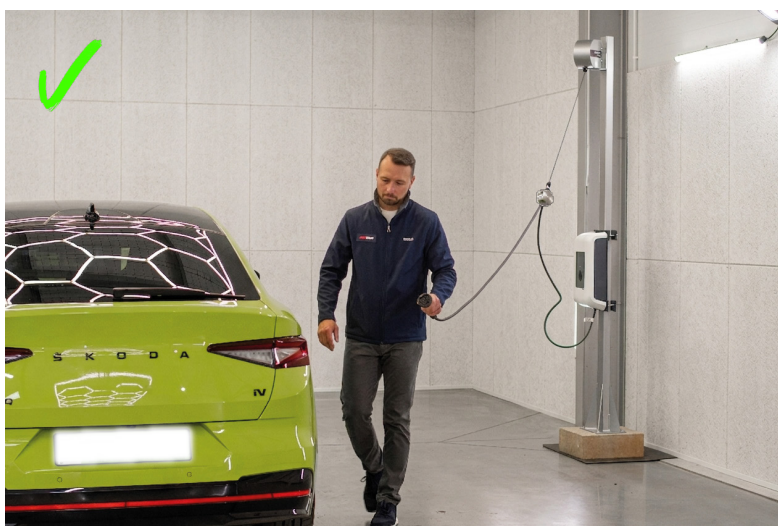

16,5-32 mm

Retractor models

MODEL	UDŹWIG	DŁ. LINKI
EVO	1-2,5 kg	300cm
EVI	2-4 kg	300cm
EV2	4-6 kg	300cm
EV3	6-8 kg	300cm

with the EV Retractor

without the Retractor

The Pneumatico EV Retractor is an innovative holder with an automatic cable-retraction feature that is revolutionizing the process of charging electric vehicles. With this holder, you'll never have to deal with tangled or dirty charging cables again.

The retractor is available in four models, which differ in load capacity: EV0, EV1, EV2, EV3.

#### **CLEANLINESS**

Since there is no direct contact with the cord, your hands will always stay clean.

#### **DURABILITY**

The sturdy construction and protective cover ensure durability in any season, regardless of the weather.

#### **TIME SAVINGS**

Charging your car is now much easier and faster.

#### **CABLE MANAGEMENT**

No more annoying, tangled cords.

#### **SAFETY**

Cables are stored safely, with no risk of snagging.
